## Discovering the Concepts

## ? Inquiry Activity-Isotopes

## Information

Symbolic Notation for Isotopes

| A $X \quad$ | $=$ Mass Number |
| ---: | :--- |
| Z | $=$ Atomic Number |
| $X$ | $=$ Atomic symbol |

Isotopes of Calcium and the Number of Particles in Each

Calcium-40

Calcium-42

## Questions

1. How many protons are found in calcium- 42 and calcium- 40 ?
2. How many neutrons are found in calcium- 42 and calcium-40?
3. What is the relationship between the number of protons and the number of electrons in an atom?
4. Based on the information, what is common to all calcium atoms?
5. What could the atomic number $Z$ indicate?
6. How is the mass number A determined?
7. How would you define isotope?
8. Where are the protons, neutrons, and electrons located in an atom?
9. What do calcium isotopes have in common? How do they differ?
10. Where is most of the mass of an atom?
11. For the following isotopes, determine the number of protons, neutrons, and electrons.

## ${ }_{17}^{35} \mathrm{Cl}$

Protons =
Neutrons =
Electrons =
${ }_{17}^{37} \mathrm{Cl}$
Protons = $\qquad$
Neutrons = $\qquad$
Electrons = $\qquad$
